WPI; 2003-029926/02. N-PSDB; ACA38563.

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 62617; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the

The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required CC for cellular proliferation to isolate candidate molecules for rational CC drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at CC ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

```
CC of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

(2) cencoding a polypeptide whose expression is inhibited by the antisense

(3) an isolated

(4) an antisense in isolated

(5) contisense nucleic acid; (4) an antibody capable of specifically binding

(6) contisense nucleic acid; (4) an antibody capable of specifically binding

(7) contisense nucleic acid; (4) an antibody capable of specifically binding

(8) conjupeptide; (5) producing the polypeptide; (6) inhibiting cellular

(9) contiseration or the activity of a gene in an operon required for

(1) dentifying a compound that influences the activity of

(2) identifying a gene required for cellular proliferation or the biological

(3) pathway in which a proliferation, or that inhibits cellular proliferation; (8)

(8) compound's activity; (11) a culture comprising strains in which the gene

(2) compound's activity; (1) manufacturing an antibodic; (10) profiling a

(3) compound's activity; (11) a culture comprising strains in which the gene

(4) compound's activity; (11) a culture comprising strains in which the gene

(5) compound's activity; (11) a culture comprising strains in which the gene

(6) compound's activity; (11) a culture comprising strains in which the gene

(6) compound that inhibits the extent

(7) identifying the target of a compound that inhibits the

(8) compound that inhibits the

(9) strains; or (13) identifying the target of a compound that inhibits the

(1) determining the extent

(2) identifying proteins or screening for homologous nucleic acids are useful for

(8) control is overexpressed or underexpressed; (12) determining the extent

(13) identifying the target of a compound that inhibits the

(14) control is overexpressed or underexpressed; (12) determining the extent

(15) control is overexpressed or underexpressed; (12) determining the extent

(15) control is overexpressed or underexpressed; (12) determining the extent

(15) control is ov
the 6213 antisense sequences given in the specification where of the nucleic acid inhibits proliferation of a cell. Also inc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC to the tuberculosis complex. The invention provides a (1) fusion
CC polypeptide comprising at least one polypeptide fragment (I) and at least
CC one fusion partner; (2) a fusion polypeptide fragment (I) and at least
CC one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell
CC epitope from M. tuberculosis protein ESAT-6, or MPTS9 and a second
CC different amino acid sequence from M. tuberculosis, and/or including a
CC sequence which protects the first amino acid sequence from in vivo
CC degradation or post-translational processing; (3) a nucleic acid fragment
CC that encodes the above polypeptides. The polypeptides and nucleic acid
CC are useful as pharmaceuticals, for diagnosis of and as antigens for
CC vaccination against TB caused by Mycobacterium tuberculosis, africanum or
CC previous sensitization in an animal with bacteria belonging to the
CC tuberculosis complex. The invention also describes the use of CPP7A or
CC CP30A or a T-cell epitope of for the induction of a strong immune
CC response in a mammal; use of CPP30A, RD1-ORF3, RD1-ORF5, MPT59-ESAT6,
CC ESAT6-MPT59, CPP10A, CPP16, CPP19, CPP23, CPP23A, CPP25B, CPP28 or a T-cell
CC epitope of for diagnosis of TB in a mammal by performing a DTH type skin
CC est; use of CPP27, CPP30A, RD1-ORF3, RD1-ORF5, MPT59-ESAT6,
CC ESAT6-MPT59, CPP10A, CPP16, CPP19, CPP23, CPP23A, CPP25B, CPP2B or a T-
CC cell epitope of for the preparation of an immunological composition; and
CC for the preparation of a subunit vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

Mycobacterial strains are responsible for leprosy (M. leprae) and tuberculosis (M. tuberculosis). RSs's are mycobacterial enzyme that are generally responsible for the reaction: aaRS+aa+ATP => aaRSaa-AMP+PPi -AMP+LENA => aa-RNA+aaRS+AMP, where aa is an amino acid. IleRSs is the enzyme specific for Isoleucine, with each amino acid having its own specific enzyme. These enzymes are essential for protein production. As more and more mycobacteria become resistant to drugs and antibiotics, tester strains comprising host cells containing a recombinant mycobacterial isoleucyl-tRNA synthetase gene, can be used to rapidly assess the antimicrobial effect and specificity of isoleucyl-tRNA synthetase inhibitors. The recombinant enzymes are also useful for biochemical studies of the enzyme in elucidation of further treatment strategies. The cloning and recombinant production of the enzyme has not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding mycobacterial isoleucyl-tRNA synthetase - and corresponding vectors, recombinant hosts and tester strains for recombinant production of the enzyme used in assays to identify inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference

CC the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid concoling a polypeptide whose expression is inhibited by the antisense comprising at promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated (3) polypeptide or its fragment whose expression is inhibited by the cantisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of a gene in an operon required for conjudent or that has an activity against a biological pathway capable of specifically binding conjudentifying a gene required for cellular proliferation; (8) compound that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene conjudent is overexpressed or underexpressed; (12) determining the extent convolute acids activity; (11) a culture comprising strains in which the extent convolute acids act useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for conjudent acids activity action and conjudent manufacturing the text candidate molecules for rational confusions of force acids are useful for force acids acids

XX CC (1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell concaining the vector; (3) an isolated collection or its fragment whose expression is inhibited by the activity of a gene in an operan required for proliferation or the activity of a gene in an operan required for concaining the vector; (3) an isolated continuous co the 6213 antisense sequences given in the specification where expres of the nucleic acid inhibits proliferation of a cell. Also included invention relates to an isolated nucleic acid comprising any one expression are:

New antisense nucleic acids, useful for identifying proteins or for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs or screening ដូ

Claim 25; SEQ ID NO 54011; 1766pp; English

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense cC antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibited by the cc antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibited by the confideration or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) confidentifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this catent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               genetic scatting, with the production; gene expression; protein folding; fine chemical production; lysine production; nucleotide production; nucleotide production; nucleotide production; lipid production; diol production; carbohydrate production; aromatic compound production; vitamin production; co-factor production; food; animal feed; cosmetic; pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

```

New nucleic acid encoding variant forms of proteins required genetic stability and proper protein folding, useful for procine chemicals, specifically lysine, in microorganisms.

ired for e.g

Claim 1; SEQ ID NO 76;

265pp; German.

This invention describes novel polynucleotides and polypeptides involved in genetic stability (DNA repair and recombination, transposition of genetic material), gene expression and folding of proteins in

Polynucleotides are isolated from a nucleic acid library of C. glutamicum then mutated at the specified positions, cloned and expressed by standard methods. Cells containing vectors that express the polynucleotides are used for production of fine chemicals, preferably amino acids and specifically lysine, but more generally nucleotides, nucleosides, lipids, fatty acids, diols, carbohydrates, aromatic compounds, vitamins, co-factors and enzymes. These are useful in the food, animal feed, cosmetics and pharmaceutical industries. The polynucleotides, optionally as primers and probes, can also be used for identification of metabolic activity. Cells that contain the polynucleotides of the invention may produce fine chemicals in better yields, with higher productivity and/or more efficiently.
                             The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence given in least 90% identity or which hybridises with the sequences given in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding fusion protein, comprising a sequence selected from 1097 sequences giver in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a heterologous polypeptide. (I) has antidiarrheic and antibacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bifidobacterium longum NCC2705; Bifidobacterium; bacterial; antidiarrheic; antibacterial; inhibitor of Salmonella; detection; identification; lactic acid bacterium; diarrheea; pathogenic bactrotavirus; food composition; pharmaceutical composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bifidobacterium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC a probe) is useful for the detection and/or identification of CC Bifidobacterium longum in a biological sample. A carrier containing the CC lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be CC used for preventing and/or treating diarrheae brought about by pathogenic CC bacteria and/or rotavirus. The carrier is a food composition selected CC from milk, yogurt, curd, cheese, fermented milks, milk based fermented CC products, ice-creams, fermented cereal based products, milk based CC powders, infant formula, pet food or a pharmaceutical composition CC selected from tablets, liquid bacterial suspensions, dried oral CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. CC (I) is useful in DNA arrays or chips to carry out analysis of the CC expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent CC Listing from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented CC in the printed specification but is based on sequence information CC supplied by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                          ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     I arbitrary region in the sequence, providing a vector that contains a CC sequence homologous with the selected region and a marker gene, cc transformation, and homologous recombination. The genome is preferably the genome of a hyperthermostable archaebacterium, particularly cc Thermococcus kodakaraensis KODI. The method is for targeting the cc disruption of a gene in the genome of an organism, which is applicable in studying gene structure and functions as well as enzyme activities of encoded proteins and useful in medicine, forensic science, food or drug inspection, molecular biology and immunology. With this method, the cdisruption of a gene at an arbitrary position in a genome can be achieved efficiently and reliably. The present sequence is that of a protein cencoded by the genome of Thermococcus kodakaraensis which was derived cusing the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

OM protein - protein search, using sw model

Run on: April 14, 2006, 17:19:08; Search time 6.33288 Seconds (without alignments) 1640.866 Million cell updates/sec

Title: US-10-620-246-4
Perfect score: 538
Sequence: 1 MAADPESTAALPDGAGLVVL......ADLADGVAIGDGVRVSIEKT 108
Scoring table: BLOSUM62
Gapop 10.0, Gapext 0.5
Searched: 283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters: 283416
Minimum DB seq length: 0
Maximum DB seq length: 200000000
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

1 Proc. Natl. Acad. Sci. U.S.A. 101:14925-14930(2004).

1 Proc. Natl. Acad. Sci. U.S.A. 101:14925-14930(2004).

1 C -! CATALYTIC ACTIVITY: ATP + L-isoleucine + tRNA(Ile) = AMP

2 diphosphate + L-isoleucyl-tRNA(Ile).

2 -! SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

2 EMBL; AP006618; BAD56622.1; -; Genomic_DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score
